

DrFirst MedHx

GO-LIVE 5/4/23

Summary

On **5/4/23**, DrFirst Medication History will be **replacing External Rx History**.

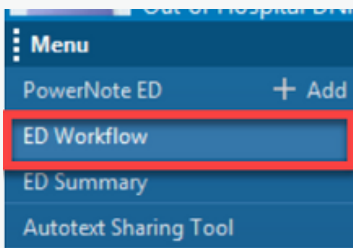

DrFirst Medication History uses Artificial Technology Intelligence (AI) to pull real-time responses whenever the page is loaded in Cerner. By using the patient's last name, first name, date of birth, gender and zip code, DrFirst Medication History can retrieve an updated list of home medications from various data sources such as surescripts, local pharmacies, insurance payers, and more. Clinicians will be able to import these medications into the Cerner Medication List, allowing for more accurate and up-to-date medication information for patients. This new solution aims to streamline the medication history gathering process for clinicians, making it more efficient and reliable.

Where is DrFirst Medication History Located?

DrFirst Medication History and Cerner Existing Medications List can be found on the **Workflow Mpage** or the **Summary Mpage**, depending on the user's position.
