

# NEW FLOWSHEET: RISK SCORES AND ASSESSMENTS

## GO-LIVE 3/5/24

### Summary

To enhance accessibility for providers in locating crucial patient care details, a new flowsheet has been created. This flowsheet contains scores and assessment data that were previously difficult to find.

### Key Points

**Risk Scores and Assessments** Flowsheet contains the following assessments:

- VTE (Venous Thromboembolism)
- CIWA (Clinical Institute Withdrawal Assessment)
- IBW (Ideal Body Weight)
- PCA (Patient Controlled Analgesia)

Note: If the assessment is not documented, then it will not appear in the flowsheet. This may mean that the assessment hasn't occurred or that the patient doesn't meet the criteria for it.

The screenshot shows a medical flowsheet titled "Risk Scores and Assessments" for a patient from November 10, 2022, to February 21, 2024. The interface includes a top navigation bar with tabs like "Last 48hr Results", "Lab Results", "Microbiology", "Radiology", "Vital Signs", "Respiratory Therapy", "All Results", "Anticoagulation", "Diabetic Flowsheet", "Quality Measures View", "DBA Use Only", and "SARS-CoV-2 Flowsheet". The left sidebar has a "Navigator" pane with checkboxes for "Risk Scores and Assessment", "VTE Risk Assessment", and "Alcohol Withdrawal Assessment". The main table displays data for five dates: 1/26/2024 10:30 AM CST, 1/26/2024 10:33 AM CST, 1/26/2024 10:56 AM CST, 1/26/2024 11:07 AM CST, and 1/26/2024 11:11 AM CST. The table contains various assessment items with scores and interpretations.

Risk Scores and Assessments	1/26/2024 10:30 AM CST	1/26/2024 10:33 AM CST	1/26/2024 10:56 AM CST	1/26/2024 11:07 AM CST	1/26/2024 11:11 AM CST
